Description

Predict the number of comments in a blog using available features

Data

Dataset used here is the *BlogFeedback Data Set* by Krisztian Buza, it can be found on UC Irvine Machine Learning Repository. There are 60 test files and one training file in the dataset.

In total, 281 attributes are available for each observation. Our goal is to predict the number of comments in the next 24 hours. Certain variables are removed in prepossessing due to lack of variations.

The models are fitted on the log-transformed responses. Model performances are measured by mean squared error

Problem- prediction of the number of comments in the upcoming 24 hours on those blogs, The train data was generated from different base times that may temporally overlap. Therefore, if you simply split the train into disjoint partitions, the underlying time intervals may overlap. Therefore, the you should use the provided, temporally disjoint train and test splits to ensure that the evaluation is fair.

 a. Read the dataset and identify the right features
 b. Clean dataset, impute missing values and perform exploratory data analysis.
 c. Visualize the dataset and make inferences from that
 d. Perform any 3 hypothesis tests using columns of your choice, make conclusions
 e. Create a linear regression model to predict the number of comments in the next 24 hours (relative to basetime)
 f. Fine tune the model and represent important features
 g. Interpret the summary of the linear model
 h. Report the test accuracy vs. the training accuracy
 i. Interpret the final model coefficients
 j. Plot the model result and compare it with assumptions of the model

Stacked Generalization

1. Split the training dataset in to k folds.
2. For i-th fold of training data, train models with each of the level-0 learners on the rest of the training data.
3. Make predictions using the models we trained:

- make predictions on i-th fold of data.
- make predictions on the test set.

4. Repeat 2. and 3. until we used all k folds of training data.
5. Generate the level-1 data using predictions we obtained:

- generate level-1 training data by concatenating the predictions we made on each fold of the training data.
- generate level-1 test data by averaging the predictions we made on the test set.

6. Train a level-1 generalizer using the level-1 data and the correct responses, make predictions.

R Markdown

This is an R Markdown document. Markdown is a simple formatting syntax for authoring HTML, PDF, and MS Word documents. For more details on using R Markdown see http://rmarkdown.rstudio.com.
When you click the **Knit** button a document will be generated that includes both content as well as the output of any embedded R code chunks within the document. You can embed an R code chunk like this:

```
summary(cars)

##      speed           dist
##  Min.   : 4.0   Min.   :  2.00
##  1st Qu.:12.0   1st Qu.: 26.00
##  Median :15.0   Median : 36.00
##  Mean   :15.4   Mean   : 42.98
##  3rd Qu.:19.0   3rd Qu.: 56.00
##  Max.   :25.0   Max.   :120.00
```

Including Plots

You can also embed plots, for example:

Note that the echo = FALSE parameter was added to the code chunk to prevent printing of the R code that generated the plot.
